

Productivity Tools & Knowledge Pool

Integrating **analytics, leadership and tools** drives our methodology when executing measures to improve productivity or manage quality. A tool box with software applications is helping us and is offered as a cloud-solution to you.

This set of tools enables you to systematically deploy the methods underlying them. In parallel, a knowledge pool is being built up, allowing for usage across teams, functions, and sites while documenting the approach and its results in a ready to be audited fashion.

1. Training & Tool Box Package

For the effective use of the tools we offer:

- Introduction training of the methods (5 ½ hours, 12 persons max)
- Planning for deploying the methods in your organization
- Usage of the software package for 12 months (afterwards monthly fee)
- **Price 2,830 Euro** + travel and VAT

Continued usage after first year 43 Euro / month for up to 25 users incl. maintenance and back up service. The software is a (private-) cloud service and immediately available. Applications can be easily individualized and complemented.

The following tools are currently available:

- 5S – productive work-place
- SIPOC – process structure
- Value Stream Mapping
- 5Why?! – root cause analysis
- FMEA – risk analysis
- Decision matrix
- Tasks – action management
- 8D-report (QM/PM) – documentation

2. Deployment of the methods across your organization

Those methods become very productive if rooted deeply into the organization. A knowledge pool is being created automatically while working the individual projects. We are happy supporting you with the implantation, continued deployment and monitoring.

We offer the following modules:

- **Training sessions** for additional groups of employees
- **Intensification** of 5Why?! and FMEA
- **Support of the first projects**
- **Leadership coaching** (implementation / deployment)
- Set up of a **monitoring** process
- Buildup and usage of the **knowledge pool**
- Tailored offering upon request

3. Your personalized management system

Our cloud-based software is the basis for flexible tools ranging **from activating your sales force to safeguarding your processes (QM)**. Starting point is the specific understanding of your situation (**analysis**), the effective inclusion of the employees

(**leadership**), and consistent execution (**tools**). Key to success is that any management system and the IT-application follows and delivers to your specific needs.

From us you receive solutions not just software.

Better decisions, effective actions, and faster execution – while building up a knowledge pool.
